PROJECTS

FirstTeamAPP
https://github.com/ValeriyFromUA/FirstTeamApp
The job search application is created using the Flask framework and tools such as Flask-Login, SQLAlchemy, and Docker. The application allows users to create and search for job opportunities through personalized recommendations for job seekers and employers.

IT-helper
https://github.com/ValeriyFromUA/IT-helper
A Django application for a startup that allows the collection of customer requests and notification of staff members via Telegram or email. The application also provides the ability to track statistics and record provided services for analysis and business management.

Students DB
https://github.com/ValeriyFromUA/Students_Db
This application enables the insertion, selection, update, and deletion of data in a student database (PostgreSQL) using SQLAlchemy and Flask Rest Framework.
